

ARTICLE VII.—*First Supplement to the Check-List of the Coccidae.* BY T. D. A. COCKERELL, *New Mexico Agricultural Experiment Station.*

Since the publication of the Check-List* in 1896 no less than three hundred and twenty-two species have been added. A few of these are old species which had been accidentally omitted or improperly reduced to synonyms, but the number of actually new species is very great, and bears witness to the activity of coccidologists. Forty species, given as valid in the Check-List, are here reduced to varieties or synonyms.

As before, I have included a number of names of species (mostly by Green) which I know to be either in press or awaiting very early publication.

The group *Idiococcinae* has been abandoned and merged into *Coccinae*. The *Coccinae* could very well be divided into two subfamilies and perhaps four tribes, as follows:

- (A.) *Coccinae*. Newly hatched larva with rows of dorsal spines, and the last antennal joint usually short.
- (1.) *Coccini*. Anal ring hairless. (*Coccus*, etc.)
 - (2.) *Eriococcini*. Anal ring hairy, hairs normally 8. (*Eriococcus*, etc.)
- (B.) *Dactylopiinae*. Newly hatched larva without dorsal spines, last antennal joint usually long.
- (1.) *Sphaerococcini*. Anal ring hairless. (*Sphaerococcus*.)
 - (2.) *Dactylopiini*. Anal ring hairy, hairs normally 6. (*Dactylopius*, etc.)

Species which were in the original list, here repeated to indicate varieties, synonyms, etc., have the original numbers.

Since the Check-List was written, the following new writers have described and named *Coccidae*. To facilitate correspondence I give their addresses:

Bogue, E. E., Stillwater, Oklahoma.

Cooley, R. A., Agricultural College, Amherst, Mass.

*Article XI. Vol. V. of this series.

- Charmoy, D. d'Emmerez de, Port Louis, Mauritius.
 Ehrhorn, E. M., Mountain View, Sta. Clara Co., Cal.
 Fuller, Claude, Department of Agriculture, Cape Town,
 S. Africa.
 Hunter, S. J., Lawrence, Kansas.
 Ihering, H. von, S. Paulo, Brazil.
 King, G. B., Lawrence, Mass.
 Leonardi, G., Portici, Italy.
 Lidgett, J., Myrmiong, Victoria, Australia.
 Newell, W., Ames, Iowa.
 Pergande, Theo., Dept. Agriculture, Washington, D. C.
 Tinsley, J. D., Mesilla Park, New Mexico.

I may also permit myself to mention that my own address is now Mesilla Park, New Mexico. (Not Mesilla, nor Las Cruces.)

(16.) *Phenacaspis*, *Cooley* and *Ckll.*, will be a new genus to include *P. nigra*, *chinensis*, *engelicæ*, etc., hitherto placed in *Chionaspis*. Mr. *Cooley* and the present writer agree that these forms have no genetic relationship with genuine *Chionaspis* except through *Aulacaspis* and *Diaspis*. I leave Mr. *Cooley* to publish the generic characters and classify the species.

(17.) Mr. *Cooley* is responsible for the synonymy.

(18.) According to Mr. *Cooley*.

(19.) Mr. *Cooley* finds that specimens of *C. prunicola* from Mr. *Maskell* are *Diaspis amygdali*. It is just possible that *Maskell* accidentally mixed the *Diaspis* with a genuine *Chionaspis*, however, and that *prunicola* may still be valid.

(20.) This could very well pass for *Aspidiotus anegulus*, did it not have a *Diaspis* male scale! *D. piricola*, in Europe, was long confounded with *Aspidiotus ostryaeformis*.
